PROFILE

Software Engineering student at ENSIT focused on AI, NLP, RAG systems, and backend engineering, with experience building reinforcement learning applications and LLM security infrastructure. Comfortable owning features end-to-end, from API design and implementation to deployment.

EDUCATION

Higher National Engineering School of Tunis (ENSIT) <i>Engineering Degree in Software Engineering</i>	Tunis, Tunisia Sep 2024 – Jun 2027
Tunis Preparatory Engineering Institute (IPEIT) <i>Preparatory Classes in Mathematics and Physics</i>	Tunis, Tunisia Sep 2022 – Jun 2024

PROFESSIONAL EXPERIENCE

AI Security & Data Privacy Engineering Intern <i>ATS Dev</i>	Summer 2026, Tunis, Tunisia
- Designed and built an internal OpenAI-API-compatible AI Security Gateway used as the company's entry point for LLM requests, ensuring requests pass through security and privacy guardrails before reaching third-party providers. - Engineered a reversible PII anonymization module using an NLP pipeline (GLiNER, spaCy) for automatic entity detection, token replacement, and a secure local vault for de-anonymizing responses. - Owned the full stack: FastAPI backend with API-key authentication, request routing, and audit logging, plus a React dashboard for reviewing flagged requests. Stack: Python, FastAPI, React, TypeScript, PostgreSQL, Presidio, GLiNER, spaCy, Docker.	

Software Engineer (Part-time) <i>CyberSqool</i>	Oct 2025 – May 2026, Remote, Morocco
- Shipped backend features and contributed to architectural decisions on a production EdTech platform serving live users. - Automated content personalization and recurring operational tasks using n8n workflows, reducing repetitive manual work.	

Software Development Intern <i>LBConsulting</i>	Summer 2025, Tunis, Tunisia
- Developed the backend of MaFederation, a sports-federation management platform, with a JWT-secured Spring Boot API and role-based access across 3 user types (federation staff, clubs, and members). - Built the Angular frontend and digitized core federation workflows, reducing manual administrative work and replacing previously manual processes with a centralized platform. - Collaborated in an agile team through sprint planning, code reviews, and adherence to company development standards.	

SELECTED PROJECTS

Wheel Match: Medical Equipment Matching Platform <i>Full-Stack / RAG</i>	GitHub
- Connected 3 stakeholder groups (patients, clinicians, and vendors) through a platform recommending suitable wheelchairs based on a patient's profile and needs. - Built the FastAPI backend with JWT authentication and role-based access for the platform's core workflows. - Engineered a RAG pipeline featuring document chunking, pgvector indexing, and semantic retrieval for product queries, grounding LLM-generated responses in platform product information.	
SmartTrafficRL: Intelligent Traffic Signal Control <i>AI / Reinforcement Learning</i>	
- Simulated single- and multi-intersection urban traffic networks in SUMO and developed adaptive traffic signal controllers using Q-Learning and Deep Q-Networks. - Implemented and compared 3 control strategies (fixed-time, Q-Learning, and Deep Q-Network) across single- and multi-intersection configurations. - Achieved a 23% reduction in average waiting time and a 17% increase in throughput compared with fixed-time control.	

TECHNICAL SKILLS

Languages: Python, Java, TypeScript, JavaScript, C++, C
Backend: FastAPI, Spring Boot, REST APIs, SQLAlchemy
Frontend: React, Angular, HTML, CSS
AI / LLM Engineering: RAG, LLM Ops, LLM Agents, LangGraph, Information Retrieval, Embeddings, Vector Search, NLP, LLM Security, PyTorch, Reinforcement Learning, Streamlit
Databases / DevOps: PostgreSQL, pgvector, MySQL, Docker, Git, Linux, CI/CD, Alembic
Engineering: System Design, Agile/Scrum, Code Review, TDD

CERTIFICATIONS

AWS Certified AI Practitioner (AIF-C01) | Microsoft Azure AI Fundamentals (AI-900) | GitHub Advanced Security | Cisco CCNA

LEADERSHIP & ACHIEVEMENTS

Vice President, ENSIT Geeks Club	2024 – 2026
Organized the Geekshack competitive-programming hackathon, ran technical workshops, and coached students preparing for national competitions.	
Open Startup (OST) Program Participant	2025
Participated in the Open Startup program, developing entrepreneurial and innovation skills alongside technical engineering training.	
1st Place, ENDA Hackathon	Apr 2026

LANGUAGES

Arabic (Native) | French (B2) | English (C1)
